Dual Band Signal Booster

USHR-0819H

Operating Functions:

Automatic Level Control (ALC) controls the output power to compensate for breathing (changes) from the donor site. **75 Dual Band.**

Automatic Shutdown protects the amplifier. The amplifier will activate if there is too strong of an input signal or during high oscillation.

LED indicating status for booster - normal or abnormal.

RS-232C port (included on the amplifier) to interface with a laptop for more customized settings. Manual Dip Switches on the amplifier
